

Assignment-2

HTML, CSS, DB2, Python & Flask

Assignment Date	13 October 2022
Student Name	Ms. J SAHAYA JEMI SELSA
Student Roll Number	960519106064
Maximum Marks	2 Marks

Question-1:

1. Create User table with email, username, roll number, password.
2. Perform UPDATE,DELETE Queries with user table
3. Connect python code to db2.
4. Create a flask app with registration page, login page and welcome page. By default load the registration page once the user enters all the fields store the data in database and navigate to login page.
5. Authenticate user with username and password. If the user is valid show the welcome page

Solution:

app.py

```
from flask import Flask,render_template,redirect,request,url_for,session,flash
import sqlite3
food=Flask(__name__)
food.secret_key="123"

con=sqlite3.connect("data.db")
con.execute("CREATE TABLE IF NOT EXISTS data(pid INTEGER PRIMARY KEY, name TEXT, d_o_b
INTEGER,age INTEGER,email TEXT,password INTEGER)")

con.close()

@food.route("/")
def signup():
    return render_template("signup.html")
@food.route("/submitting",methods=['POST','GET'])
def submit():
    if request.method=="POST":
        try:
            name=request.form["name"]
            d_o_b=request.form["d_o_b"]
            age=request.form["age"]
            email=request.form["email"]
            password=request.form["password"]
            con=sqlite3.connect("data.db")
```

```

        cur=con.cursor()
        con.execute("INSERT INTO
data(name,d_o_b,age,email,password)VALUES(?,?,?,?,?)", (name,d_o_b,age,email,password))
        con.commit()
        flash("registered successfully","primary")
    except:
        flash("Error in insertion","danger")

    finally:
        return redirect(url_for("insert"))
        con.close()
    return render_template("signup.html")
@food.route("/login")
def login():
    return render_template("login.html")
@food.route("/verify", methods=["GET", "POST"])
def insert():
    if request.method=='POST':
        name=request.form['name']
        password=request.form['password']
        con=sqlite3.connect("detail.db")
        con.row_factory=sqlite3.Row
        cur=con.cursor()
        cur.execute("SELECT * FROM data where name=? and password=?", (name,password))
        data=cur.fetchone()
        if data:
            session["name"]=data["name"]
            return render_template("home.html")
        else:
            flash("Username and Password Mismatch","danger")
    return render_template("login.html")
@food.route("/home")
def home():
    return render_template("home.html")

if __name__=='__main__':
    food.run(debug=True)

```

UserScheme.sql

```
CREATE TABLE data(pid INTEGER PRIMARY KEY, name TEXT, d_o_b INTEGER, age  
INTEGER, email TEXT, password INTEGER)
```

Signup.html

Eat Well & Sleep Well

Sleep is necessary to help regulate hormones that control appetite. Lack of sleep can increase reduction of hormones that signal hunger and decrease production of hormones that tell us were full .
